

## MOUNT PEARL, NL

### 100 Radon Test Kit Challenge

## 91 HOMES

participated by testing for radon gas during the winter of 2020. This represents approximately 1% of the community dwellings.

**14%** of homes tested above Health Canada's guideline of 200 Bq/m<sup>3</sup>.

Radon is a naturally occurring radioactive gas that comes from the ground.

Exposure to elevated levels of radon is linked to increased chances of developing lung cancer.

UNDER 100 Bq/m<sup>3</sup>  
(42%)

100-200 Bq/m<sup>3</sup>  
(44%)

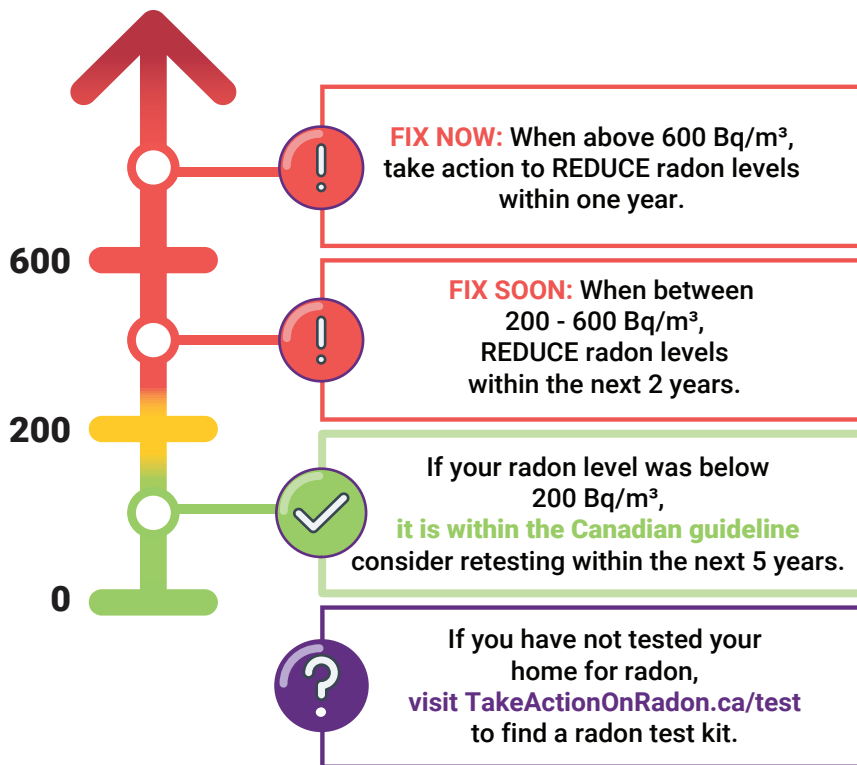

OVER 200 Bq/m<sup>3</sup>  
(14%)

Levels can vary between neighbouring houses. The only way to know your radon level is to test.

Radon enters a home through contact with the ground and can build up to elevated levels.

Radon gas levels are reduced the most by installing a **radon mitigation system**. Research shows that **certified radon professionals** can reduce levels by over 90%. Other steps, such as increasing ventilation and sealing cracks, can help in the short-term but are less effective.

For more information, go to:

## HOW TO FIND A CERTIFIED PROFESSIONAL

Certified radon mitigation professionals are trained to properly assess your home, and design systems to efficiently and effectively reduce your radon level.

### Go to:

[TakeActionOnRadon.ca/test/find-a-radon-mitigation-professional/](https://TakeActionOnRadon.ca/test/find-a-radon-mitigation-professional/)

The Newfoundland and Labrador Building Code allows each municipality to introduce building code measures. Mount Pearl Building Code has recently made it a requirement to include the installation of a short “radon stub pipe” through the basement floor of new houses. This is not a complete radon mitigation system; it is simply the connection point if a system is required. Every home needs to be tested for radon for at least 91 days, during the heating season to determine if a mitigation system is required.

A **radon mitigation system** is installed with a fan that draws air (and radon) up from beneath the foundation and discharges the radon to the outdoors. This system reduces radon levels by preventing radon from entering your home.

### Missed your chance to test?

Check out Take Action on Radon’s website for more information on how to access a long-term (91-day) test kit in your region and how to properly test your home.
