

# PROTECT YOUR FAMILY:

## Get CASH BACK with the Saskatchewan Home Renovation Tax Credit!

CARST and The Lung Association of Saskatchewan are encouraging Saskatchewan residents to test for radon now. If radon levels are high, residents can claim mitigation expenses incurred by December 31, 2022.

**STEP 1:** Learn more about radon and order a test kit at [HomeRadonTest.ca](http://HomeRadonTest.ca)

OR, Find a certified professional to measure radon levels:

[c-nrpp.ca/find-a-professional](http://c-nrpp.ca/find-a-professional)

Radon is a naturally occurring radioactive gas that enters homes from the ground. Radon exposure is the second leading cause of lung cancer after smoking. Radon is present in varying levels in every home and building in Canada, and exposure to high levels increases the risk of developing lung cancer. It is odorless, tasteless and colourless and the only way to know how much is in your home is to test.

**STEP 2:** If levels are high, use a certified professional to mitigate radon. Find a certified mitigation professional at [c-nrpp.ca/find-a-professional](http://c-nrpp.ca/find-a-professional)  
In Saskatchewan, recent testing found **35%** of homes tested had radon levels above Health Canada's action guideline (200Bq/m3) and **73%** had levels above the World Health Organization's action guideline (100Bq/m3).

**STEP 3:** Claim radon expenses under the Home Renovation Tax Credit. For more information visit [saskatchewan.ca/home-renovation-tax-credit](http://saskatchewan.ca/home-renovation-tax-credit)

Through Saskatchewan's Home Renovation Tax Credit, Saskatchewan residents can claim **10.5%** of eligible home renovation expenses incurred between October 1 2020 and December 31, 2022 on their 2021 and/or 2022 income tax returns. Radon measurement and professional mitigation services and equipment fit the definitions of eligible expenses.
